

AIR QUALITY

BROAD REACH

Clients in the manufacturing and utilities industries call on us to guide them through the fine points of this highly regulated area of environmental law. Our Air Quality attorneys advise companies regarding existing clean air laws, regulations, and on developing initiatives – so you don't get caught off guard.

When permit terms are unclear or new construction requirements seem murky, we have the experience you need. Our clients range from companies with straight-forward air permitting needs and compliance questions to entities engaged in substantial industrial activities that result in significant air emissions, major construction projects, and modifications to complex sources of emissions. We assist clients across the country with all aspects of federal, state, and local requirements governing airborne emissions.

Representative clients are those in manufacturing and industries such as steel and other metal-producing and forming; electric power production; petrochemical; fiberglass manufacturing; recreational vehicle manufacturing; and other manufacturing processes.

Our Air Quality attorneys have in-depth experience advising clients on issues such as:

- Construction and operating permit issuance, including permit negotiations and appeals
- Planning for new or expanding operations
- New Source Review under the Prevention of Significant Deterioration

Why Barnes & Thornburg?

Finding new ways to help clients identify solutions and new business opportunities, across industries, is at our core. We are, at times, more than lawyers, we are advisers bringing new ideas to light. We understand what keeps you up at night and work collaboratively to find practical and creative solutions, at the heart of business.
